

Why Replace?

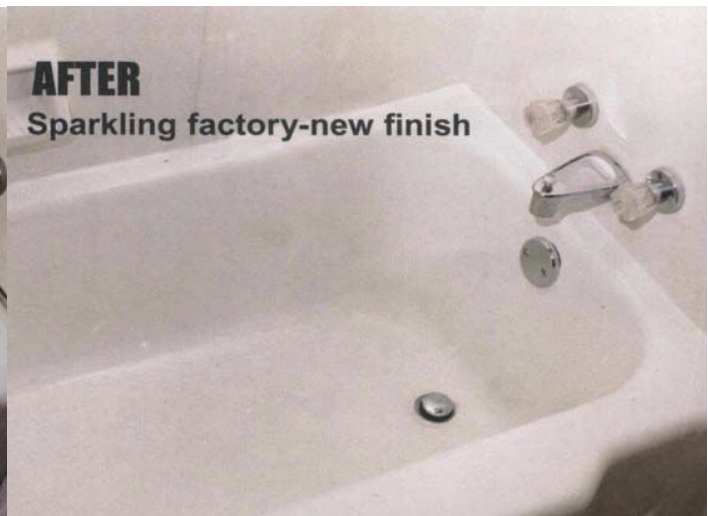

Restore!

SAVE BIG \$\$\$

Replacing your bathtub involves not only the cost of the new tub, but the added expense of replacing wall and floor tile, wall board, plumbing and hardware. Refinishing with our process will quickly transform your tub to a sparkling factory-new finish.

Refinishing your existing bathtub with our environmentally friendly system is the most economical way to revitalize your bathroom and you will realize spectacular savings, often as much as 80% over replacement!

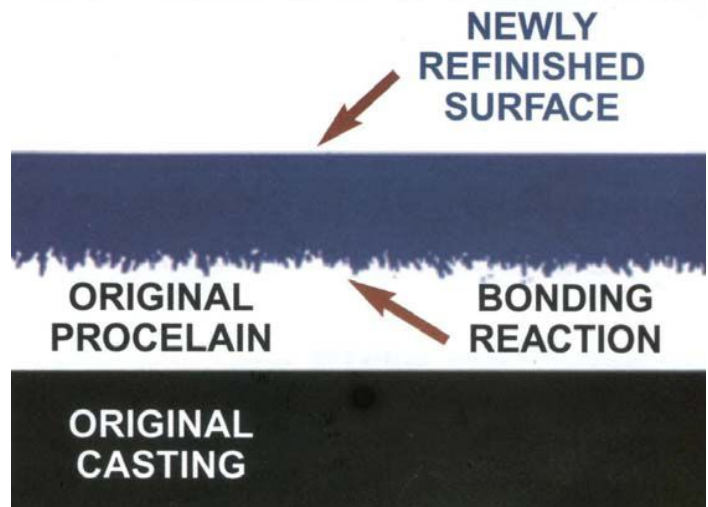

HOW DOES IT WORK?

Our process is a remarkable time-tested method developed specifically for bathroom refinishing.

The secret lies in the ability of the compounds to fuse on a molecular level to the substrate, becoming a permanent part of the original surface, unlike bath liners.

Your refinished bathtub is ready to use overnight and easy to clean. Our process ensures the best possible protection against impacts, stains, and chemicals for years of reliable service.
